

## Martin Ndung'u

Fullstack developer || Nairobi, Kenya || phone: +254703605544 || [portfolio](#) | [martindevelopske@gmail.com](mailto:martindevelopske@gmail.com)

I have extensive experience developing and executing top-notch web apps as a seasoned full-stack developer. With a strong background in server-side architecture and seamless user experiences, I am proficient in both front-end and back-end technologies. I am committed to providing creative solutions and keeping up with the most recent business trends in order to effectively contribute to any development project. I have a track record of success in this regard.

### EXPERIENCE

**Songa: Full-stack Engineer** ([LinkedIn](#)) (Jan 2023 - Sep 2023)

As a full-stack developer, I was able to effectively establish server-side logic and database structures, which helped build reliable apps. Furthermore, I was an expert in creating effective server-side APIs that enabled smooth communication between the front-end and back-end parts. I set up and maintained web servers to guarantee application dependability and peak performance. When problems occurred, I was excellent at debugging and diagnosing application failures, using a methodical manner to quickly fix problems. My job was centered around collaboration; to create new and well-coordinated solutions, I worked closely with designers, product managers, and other engineers in cross-functional teams.

**Freelance Developer** (2022 - present)

As a freelance developer, I collaborate with diverse clients to deliver custom websites and web application solutions tailored to their specific needs. I leverage my expertise in front-end and back-end technologies to create user-friendly and efficient applications that meet client expectations. My work involves translating business requirements into functional code, ensuring seamless integration with existing systems, and consistently meeting project deadlines.

### TECHNICAL SKILLS

**Front-End:** React, Nextjs, Typescript, Javascript, CSS, Tailwind, Bootstrap, MUI, HTML.

**Back-End:** NodeJs, Javascript, Typescript, Express, Prisma ORM.

**Databases:** MongoDB, Redis, Postgresql

**Devops:** Git, Jenkins, Docker, Kubernetes, Terraform, AWS

### PROJECTS

**Songa app** ([view](#))

Songa is a ride service application which bridges the gap between riders in Kenya and their clients. Built with Node JS, express, postgresql, prisma and Next js. Allows users to request for rides, get rides, pay for rides and complete rides.

**E-commerce site** ([view](#))

An E-commerce web application built with React JS, node JS, express, and mongoDB. This allows users to authenticate, add products, check inventory and also customers to make purchases.

You can take a look at more projects on my portfolio- [Projects](#).

### INTERESTS

I am a huge football and basketball fan, also playing both during my free time. I also love coding things out for fun.
